## The Congressional Apportionment Problem

Determine how many seats in the U.S. House of Representatives each state gets.

## CONGRESSIONAL SEATS

(US apportionment population $=309,183,463$ )/435 $\approx 710,767$

## The Constitution: Article I

Section 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

## The Constitution: Article I

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, . . .

## The Constitution: Article I

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, . . .

Representatives . . . shall be apportioned among the several States . . . according to their respective Numbers, . . .

## The Constitution: Article I

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, . . .

Representatives . . . shall be apportioned among the several States . . . according to their respective Numbers, . . .

The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, . . .

## The Constitution: Article I

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, . . .

Representatives . . . shall be apportioned among the several States . . . according to their respective Numbers, . . .

The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, . . .

The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; . . .

## Rule of Three

Federalists in Congress apply a new idea:
Multiply the House size by each state's proportion to determine the state's quota (fair share of the House).

## Rule of Three

## Federalists in Congress apply a new idea:

Multiply the House size by each state's proportion to determine the state's quota (fair share of the House).

$$
q u o t a=(\text { House size }) \times \frac{\text { state population }}{\text { national population }}
$$

## Basic Jefferson Method

After Washington's veto on 5 April 1792, Congress quickly passed the original Senate bill. Washington signed the bill on 14 April 1972.

# Two Methodologies

$h$ is the resource

## Two Methodologies

- Divisor Methods
- Basic: $h$ is the result
- Modified: $h$ is the goal
- Quota Methods
$h$ is the resource
Divisor methods create seats.
Quota methods distribute seats.

## Basic Jefferson Method

1. Decide on a divisor $d$ (constituency).

## Basic Jefferson Method

1. Decide on a divisor $d$ (constituency).
2. Calculate each state's quotient:

$$
\begin{aligned}
\text { quotient } & =\text { population/divisor } \\
q & =p / d
\end{aligned}
$$

## Basic Jefferson Method

1. Decide on a divisor $d$ (constituency).
2. Calculate each state's quotient:

$$
\begin{aligned}
\text { quotient } & =\text { population/divisor } \\
q & =p / d
\end{aligned}
$$

3. The state's apportionment is the integer part of $q$ : $a=\operatorname{int}(q)$.

## Basic Jefferson Method

1. Decide on a divisor $d$ (constituency).
2. Calculate each state's quotient:

$$
\begin{aligned}
\text { quotient } & =\text { population/divisor } \\
q & =p / d
\end{aligned}
$$

3. The state's apportionment is the integer part of $q: a=\operatorname{int}(q)$.

The resulting house size is the sum of each state's apportionment.

## First 60 years

> A Basic Divisor Method would be used as the House apportionment method until 1850.
$*$ 1790: $s=15 ; d=33000 \Rightarrow h=105$
$*$ 1800: $s=16 ; d=33000 \Rightarrow h=141$
$*$ 1810: $s=17 ; d=35000 \Rightarrow h=181$
$*$ 1820: $s=24 ; d=40000 \Rightarrow h=213$
$*$ 1830: $s=24 ; d=47700 \Rightarrow h=240$
$*$ 1840: $s=26 ; d=70680 \Rightarrow h=223$

## 1830 Census

Three new methods are proposed to deal with the decimal part of a state's quotient.

## 1830 Census

Three new methods are proposed to deal with the decimal part of a state's quotient.

Jefferson: round down.

## 1830 Census

Three new methods are proposed to deal with the decimal part of a state's quotient.

Jefferson: round down.
Adams: round up.

## 1830 Census

Three new methods are proposed to deal with the decimal part of a state's quotient.

Jefferson: round down.
Adams: round up.
Dean: round down or up according to which option gives a state's constituency closest to the divisor.

## 1830 Census

Three new methods are proposed to deal with the decimal part of a state's quotient.

Jefferson: round down.
Adams: round up.
Dean: round down or up according to which option gives a state's constituency closest to the divisor.

Webster: round normally.

## James Dean

In 1830 the US population was $11,931,578$. Consider: constituency = 50,000 people.

## James Dean

In 1830 the US population was 11,931,578. Consider: constituency $=50,000$ people.

Vermont's population: 280,657.
Vermont's quotient: $280,657 / 50,000=5.613$.

## James Dean

In 1830 the US population was 11,931,578. Consider: constituency $=50,000$ people.

Vermont's population: 280,657.
Vermont's quotient: $280,657 / 50,000=5.613$.
At this point, Jefferson awards 5 seats to Vermont; Adams, 6 seats.

## James Dean

In 1830 the US population was 11,931,578. Consider: constituency $=50,000$ people.

Vermont's population: 280,657.
Vermont's quotient: 280,657/50,000=5.613.

At this point, Jefferson awards 5 seats to Vermont; Adams, 6 seats.

With 5 seats the constituency is $280,657 / 5=56,131$.
With 6 seats the constituency is $280,657 / 6=46,776$.

## James Dean

In 1830 the US population was 11,931,578. Consider: constituency $=50,000$ people.

Vermont's population: 280,657.
Vermont's quotient: 280,657/50,000 = 5.613.

At this point, Jefferson awards 5 seats to Vermont; Adams, 6 seats.

With 5 seats the constituency is $280,657 / 5=56,131$.
With 6 seats the constituency is $280,657 / 6=46,776$.

A constituency of 46,776 is closer to the target constituency of 50,000; hence, Dean awards Vermont 6 seats.

## James Dean

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $p /(n+1)$ is closer to $d$ than $p / n$.

## James Dean

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $p /(n+1)$ is closer to $d$ than $p / n$.

## James Dean

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $p /(n+1)$ is closer to $d$ than $p / n$.

This is mathematically equivalent to: let the apportionment be $n+1$ iff

## James Dean

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $p /(n+1)$ is closer to $d$ than $p / n$.

This is mathematically equivalent to: let the apportionment be $n+1$ iff $q>\operatorname{HM}(n, n+1)$.

## Daniel Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $q>n+.5$

## Daniel Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $q>n+.5=\operatorname{AM}(n, n+1)$.

## Daniel Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $q>n+.5=\operatorname{AM}(n, n+1)$.

Dean:

## Daniel Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $q>n+.5=\operatorname{AM}(n, n+1)$.

Dean:

Webster:

## Daniel Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff $q>n+.5=\operatorname{AM}(n, n+1)$.

Dean:

Webster:

## Dean and Webster

Step 1: Select the constituency, $d$.
Step 2: Calculate $q=p / d$ and $n=\operatorname{int}(q)$.
Step 3: Let the apportionment be either $n$ or $n+1$, with $n+1$ iff

Dean:

$$
\text { Dean: } a=n+1 \Leftrightarrow q>H M(n, n+1) \text {. }
$$

Webster:

## In a Round About Way

## 1840 Census

The Apportionment Act of 1842 used a basic divisor method with $d=70680$ and Webster's method of rounding, yielding $h=233$.

This was the only time in U.S. history that the House size decreased as a result of a census-based re-apportionment.

## The Vinton Act

The Vinton Act of 1850 (Representative Samuel Vinton, Whig-Ohio) was passed to head off politicizing the census figures. The idea was to adopt a permanent appropriation act.

## The Vinton Act

The Vinton Act specified a House with 233 seats apportioned by Hamilton's method.

## The Vinton Act

The Vinton Act specified a House with 233 seats apportioned by Hamilton's method.

But experience exposed problems with the Vinton Act.

## Alabama Paradox

This Paradox may occur with the Hamilton method:
when the number of House seats is increased, a given state's apportion may decrease.

## 1910

Apportionment based on the 1910 census came from another mutation in apportionment methodology.

Congress abandoned the Quota Method and used a modified divisor method.

## Modified Divisor Methods

Step 1. Select the House size, $h$.
Step 2. Select a constituency, d.
Step 3. Calculate $q=p / d$.
Step 4. Round the state's quotient to get $a$.
Step 5. If the apportionments add up to $h$, then DONE; else, modify $d$ and GO TO Step 3.

## Modified Divisor Methods

Step 1. Select the House size, $h$.
Step 2. Select a constituency, d.
Step 3. Calculate $q=p / d$.
Step 4. Round the state's quotient to get $a$.
Step 5. If the apportionments add up to $h$, then DONE; else, modify $d$ and GO TO Step 3.

1910 result: $h=433$ and Webster's method.

## 1920 Census

In the 1920 decade, for the only time in U. S. History, no census-based re-apportionment act was passed.

Congress could not agree on either the size of the House or on the method of apportionment. Further, the politics of prohibition played a significant role: the dries would not support any proposal that gave the wets more power.

## Today

The current method, described in Title 2 of the U.S. Code, consists of the Apportionment Act of 1929 (which froze $h=435$ ) along with two amendments. The 1941 amendment was signed by President Franklin Roosevelt and specifies the apportionment method of

## Today

The current method, described in Title 2 of the U.S. Code, consists of the Apportionment Act of 1929 (which froze $h=435$ ) along with two amendments. The 1941 amendment was signed by President Franklin Roosevelt and specifies the apportionment method of Huntington and Hill.

## Today

The Huntington-Hill method used today is a divisor method:

Let $q=p / d$ and $n=\operatorname{int}(q)$.
Then $a=n+1$ iff $q>$

## Today

The Huntington-Hill method used today is a divisor method:

Let $q=p / d$ and $n=\operatorname{int}(q)$.
Then $a=n+1$ iff $q>\operatorname{GM}(n, n+1)$.

## They Mean Well

A modified divisor method first fixes the House size, then seeks a divisor that when the state's quotients are rounded appropriately and summed, the house size is achieved.

## They Mean Well

A modified divisor method first fixes the House size, then seeks a divisor that when the state's quotients are rounded appropriately and summed, the house size is achieved.

## The Aftermath

Michel Balinski, Professor of Mathematics at SUNY Stony Brook and H. Peyton Young, Professor of Mathematics at Johns Hopkins proved the following theorem in 1982:

## The Aftermath

Michel Balinski, Professor of Mathematics at SUNY Stony Brook and H. Peyton Young, Professor of Mathematics at Johns Hopkins proved the following theorem in 1982:

There are no perfect apportionment methods.

Any method that satisfies the quota rule produces paradoxes; any method that is free of the Alabama paradox may violate the quota rule.

## Thank You

It is time that I took my seat in this House!
